Transparent LED Display

STB Series Design

(1.9/2.8/3.9/5.2/7.8/ 10.4/ 15.6/25/3 1.25)

- Module Size: 500*125 mm
- Cabinet Size: 1000*500 mm

STB Series Design

As an innovative transparent display, STB series uses an extremely narrow bezel design to reduce the weight of the screen and the blocking of light. It has become the best choice for the current stage, exhibition, commercial display and glass walkway

STB Series Features

Easy Installation

Quick lock design, reducing installation steps. Apply large size die-casting aluminum narrow frame to make the screen more stable

High Protection, Front and Back Maintenance

Frame design can be used for indoor and outdoor protection level support both front and back maintenance

Lightweight

The LED transparent screen with hollow strip design is more flexible and approximately 3x lighter than the non-transparent LED display structure.

Outdoor Waterproof Rental Transparent LED Display Screen

Fast Installation

Freely Assembly

Easy Maintenance

Energy

Stable

All-weather

CNC Precision Machining Cabinet

Super Slim Cabinet

Good Light Transmittance

Less Wind Resistance And Safer

IP65 Waterproof, No Fear of Weather Changes

High And Low Temperature Resistance

Excellent Performance

5000cd/ m² (Outdoor)
High Brightness

2500:1
High Contrast

1920Hz/3840Hz
High Refresh Rate

Outdoor High Protection Grade

The module adopts advanced glue filling technology and waterproof rubber ring to achieve perfect waterproof, dustproof and shockproof. It can meet a variety of occasions inside and outside the user and achieve military grade IP65 full protection.

Highly Transparent

The width of each LED light bar is between 1.56-4mm, and extremely narrow border helps transparency up to 70%.

Industry Leading Pixel pitch 1.9mm

Industry's first pixel pitch 1.9mm was developed by Milestrong. Perfect display of high-definition videos.

Remote and On-site Video Upload

Using remote upload control through our intelligent management platform allows users to easily control single or multiple displays simultaneously on assigned time.

Highly Stable

The module design of the cabinet is easy to assemble, install and maintain. The module can be replaced separately.

Thickness

The thickness of the light board is 2-3mm, and the minimum width of the power box is 50mm.

Customized

The flexible frame supports curved installation, and a more suitable installation angle can be customized according to the location.

Screen Style

15° Angle-Cut Arc Lock Cabinet Combination Method

The lock can be adjusted according to the scale, achieve 15 internal arc of adjacent cabinets

The lock can be adjusted according to the scale achieve -15° external arc of adjacent cabinets

cabinet size: 1000x500(mm)

Cabinet with curved locking angle of 15° can be customized according to needs combined to form a curved screen with a wider viewing angle

45° cut angle cabinet combination method

45° angle cut on the cabinet

Combined into a 90° right-angled screen

cabinet size: 1000x500(mm)

Combined into square column screen

10° arc lock 45° angle cut cabinet combination method

45° angle cut on the cabinet

Combined into a 90° right-angled screen

cabinet size: 500x500(mm)

Combined into square column screen

Different cabinet combinations

25° external arc combined external arc screen

90° right-angle screen with cut-angle

Combined into square column screen

Installation Style

Suspended beam installation
(Maximum height 10m)

Hoist the screen on the truss with
sling straps

Suspender beam installation diagram

Insert the quick lock into the
lock hole of the hanging beam
the bayonet will lock automatically

Turn the quick lock to the right
Fastening connection

960mm

3.5kg

Thickened aluminum alloy profile
suspension beam

Stacking installation
(Maximum height 10m)

The boxes are stacked on the floor.
The viewing angles of the screen can
be freely combined as needed

*Note: The base mounting bracket can be
customized according to needs.

Easy Maintenance

Modular design easy to replace
screen modules

Quickly lock the power box to facilitate
replacement of receiving cards

Accurate Color Management System

The precise color management system is adopted. After the video is decoded by the LED control system, this secondary filter display algorithm is added to correct the color of each LED on the display point by point.

Rapid Dynamic Display

LED has nanosecond response time, its alternating time of lighting and extinguishing is very short, and there is no afterglow effect of fluorescent display technology, so it can respond to image changes quickly and has high dynamic definition. In particular, it has inherent advantages for the high demand for dynamic effect restoration. The imaging mode of LED self-illumination does not require response time, and there is no lag even in the performance of dynamic pictures. The dynamic definition is naturally higher, which is in line with the psychological perception of human eyes on the impact of motion.

Broadcast Level Gray Processing

Gray scale is the so-called color scale or gray scale, which refers to the degree of brightness and the number of layers of any color from dark to light; The LED transparent display screen achieves 16-bit gray performance, and the gray performance of the display screen is still complete under low brightness; The higher the gray level, the higher the level and brightness of the picture, which can show more image details without information loss.

Packing & Installation

Air box packaging for convenient transportation

Remote guidance installation and debugging services

Specification

Product Model	STB 1	STB 2	STB 3	STB 5	STB 8	STB 10	STB 15	STB 25	STB 31
